Lesson 1	Nature and Function of Social Sciences

What I Need to Know

At the end of the lesson, you should be able to:

1. Define social sciences and cite their importance.
2. Distinguish social sciences and natural sciences and humanities.

What I Know

In your lower years of studies, you probably tackle the concept of society as a group of people living in organized communities for cooperation and mutual benefit sharing a common territory and culture. Actions made by every individual or group of individuals may either conform or deviate from the standards of the society or what we commonly called norms (Merriam-Webster Dictionary). To know how people behave in society and understand society itself, we need to know the discipline of Social Science.

Picture Analysis

Look at the picture below and describe what you see by answering the questions provided.

1. What do you see in the picture?

   _____

2. Imagine you are living on top of the huge building in the middle, how would you describe your surroundings? How about your way of life?

   _____

3. How about if you are living on the ground level of the community, how would you describe your surroundings? Your way of life?

   _____

4. Is there a difference on how you view your surrounding? What is the reason behind this change of views?

   _____

How we see or view our surroundings depends on certain conditions like the amount of light on the surroundings, the time when we look at things, our emotions, beliefs, and even the experiences in life we had. This way of perceiving the things we see in our environment is called perspective. Perspective or point of view is a particular way on how we think and look about something that is mostly based on the knowledge we had as influenced by our beliefs and experience

(https://www.collinsdictionary.com/dictionary/english/perspective). Since our views are based on personal experiences and beliefs, there is a tendency that how we look at things can be clouded by biases and prejudices. As the author, Anais Nin says *"We do not see things as they are, we see things as we are."* To avoid these prejudices in our judgment from happening, we need valid information or facts to support our initial perspective. Thus, the need to study Social Sciences.

Social Science is a major category of academic discipline and a field of science that deals with the study of societies as well as human interactions and relations that took place within society. Social Science helps us understand the world through its branches of discipline such as sociology, psychology, history, economics, political science, law, anthropology, and geography. Knowledge brought by these disciplines will help students develop the ability to make reasonable decisions and make them model citizens in a culturally diverse and democratic society (Varia, 2020). The world we live in today is a product of the actions made by people in the past based on the standard norms of the society back then and how we live and behave today may bring significant influence in the future. The main focus of Social Science is on the study of (a) change in human relationships and reinterpretation between the present and past events, (b) human activities and spatial distributions an interaction of culture, biological and physical elements, (c) basic social systems, institutions and recesses, (d) relationships between individual and institutions; and among political economic and social institutions, and (e) the nature of societies and authors; and the interactions of people with each other and also their social and physical environment. (shodhganga.inflibnet.ac.in)

Social Science, just like any other academic discipline, has developed into the field we know today through various ideas contributed by different philosophers (see timeline below). In the 1700s, the Theory of Social Contract emerged as one of the important political theories of our time. It is integral in the growth of Social Science for it shows the relationship established between man and the state. Thomas Hobbes and John Locke both argue that that man gives up certain rights to achieve harmony and progress within the society, and his political and moral obligations depend on the agreement or contract that builds the society, thus, the government was formed. However, the philosophers differ on the type of governance that the state should embrace. For Hobbes, for the society to survive, the authority should be ceded in the hands of the monarchs or the sovereign while Locke argues that to build a civilized society, it should follow the very foundation of the natural rights of man.

Process Questions

1. How does Social Science emerge?
2. What contribution do these philosophers bring to the study of Social Science as a major academic discipline?
3. Which philosophical idea do you think is most useful in today's society? Why?

There are three practical ways of categorizing human knowledge (Yusop, 2018) namely: natural science, social science, and humanities.

Social Science as a discipline is characterized as spontaneous and unpredictable for it deals with human attitudes, behavior, and emotions that may vary from time to time and person to person and relies on the process of observation and interaction as a method of gathering knowledge and data. For instance, if you want to know the way of life of an ethnic group or how people cope with the present pandemic, observations and interviews are the best methods to use to gather qualitative data.

On the other hand, Natural Science is the scientific study of phenomena or laws of the natural world (bilogyonline.com). Data gathering involves observation and empirical/experimental proof. Natural Science is divided into two, the life or biological sciences and the physical sciences (physics, chemistry, astronomy, etc.). Unlike Social Science, the objects/phenomena being studied in natural science are characterized by exactness, control, and predictability for data used in Natural Sciences is based on repetitive experiments in laboratory-controlled environments.

Now, the field of Humanities deals with the manner in how human experience and heritage process and deals with unfolding the answer on what makes us human. It involves the study of human cultures such as literature, religion, arts, philosophy, and language. Just like Social Science, Humanities is concerned with human lives and nature involves in the field of law, linguistics, psychology, economics, and politics. But on the process of how they interpret data differs for Social Science used an empirical approach while Humanities involve a more critical and analytical approach. That is why Humanities is considered more philosophical than Social Science.

What's More

Let's check your understanding of the topic by filling in the chart with ideas comparing Social Science, Natural Science, and Humanities. Write at least one similarity or difference from each discipline based on the discussion above.

Discipline	Social Science	Natural Science	Humanities
Similarity			
Difference			

What I Have Learned

What contribution does study of Social Science can contribute to society especially during this pandemic? Cite some examples of ways to do it.

What I Can Do

Read the excerpt of a news article from inquirer.net.by Jodee A. Agoncillo last June 11, 2020, entitled "Stranded woman picked up by cops hours before death". https://newsinfo.inquirer.net/1289598/stranded-woman-picked-up-by-cops-hours-before-death#ixzz6PDcGZcCB

If I Were...

From a perspective of a Social Scientist**,** if you were one of the authorities in charge of the government during this pandemic, what possible solutions should have been made to prevent such problems and tragedies from happening in our society?

Assessment

A. Multiple Choice. Choose the letter of the best answer. Write your answer on the space provided before the number.

_____ 1. Which philosophical work is being described by the main idea "Laws and institutions are created by fallible human beings, therefore, being prone to error"?
A. Karl Marx's Das Kapital
B. John Lockes's Treaties of Government
C. Vico's New Science
D. Montesquieu's The Spirit of the Laws

_____ 2. Which Philosopher attacked the concept of Patriachalism and proposed a more civilized society based on natural rights?
A. Emile Durkheim
B. Thomas Hobbes
C. Montesquieu
D. John Locke

_____ 3. He believes that a government should be ruled by an absolute sovereign. Who is this Philosopher?
A. August Comte
B. Karl Marx
C. Thomas Hobbes
D. John Locke

_____ 4. Hard science is the other term associated with what discipline?
A. Social Science
B. Natural Science
C. Social Studies
D. Humanities

_____ 5. Which of the following is not true about Social Science?
A. it is the study of society and human behavior
B. it includes biology, chemistry, and physics
C. it may help in alleviating the problem and improve lives
D. it uses the scientific method

_____ 6. "Man by nature is a social animal" – Aristotle. What best explain this maxim?
A. Few people can isolate themselves in society

B. Socialization is part of the human experience
C. Man is in the same hierarchy as animals
D. Man is not God

_____ 7. Who is considered the "Father of Sociology"?
A. August Comte
B. Karl Marx
C. Thomas Hobbes
D. John Locke

_____ 8. Soft science is the other term associated with what discipline?
A. Social Science
B. Natural Science
C. Social Studies
D. Humanities

_____ 9. Modern society is held together by a division of labor that makes individuals dependent upon one another. Who proposed this idea?
A. Emile Durkheim
B. Thomas Hobbes
C. Montesquieu
D. John Locke

_____ 10. Which of the following is not the focus of social science?
A. Change in human relationships and reinterpretation of present and past events.
B. Concerned with the fundamental laws of the material universe
C. Basic social systems, institutions, and recesses
D. Relationships between individuals and institutions

Lesson 2 — The Discipline of The Social Science

What I Need to Know

Congratulations on your venture to a new journey of learning! Social science is a dynamic way to see and interpret things that happened in your daily life. It can help you understand human societies and the relationships among individuals within those societies.

MELC: Explain the major events and their contributions that led to the emergence of the social science disciplines

At the end of the module, you should be able to:

1. Identify the different disciplines in the social sciences
2. Compare the various social science disciplines concerning their scope of study and methods of inquiry
3. Outline the historical roots that led to the emergence of the various social science disciplines.

What's New

Task: "A Day in the Life of Others During Covid-19": This time, talk to three of your family members, neighbors, or friends regarding their experiences during the COVID-19 pandemic crisis. Write their responses on the organizer below:

Questions	Interviewee #1 Respondent #1	Interviewee #2 Respondent #2	Interviewee #3 Respondent #3
How have these changes created an impact on your daily routines?			
What have been the challenges and/or positive happenings from this situation?			
How has that made you feel about the world we live in and the future that lies ahead?			

Questions:

1. What have you noticed about their responses?
2. In what ways are they affected by the pandemic crisis? Was it always about medical or health-related?
3. How did the pandemic crisis change them as a person?

What is It

Anthropology

- Anthropology is the study of humanity in every place and time (Haviland, Prins, Walrath, and McBride, 2017). Anthropology looks for answers to biological and cultural questions about people who have lived in the past and the present. Its primary concern is human nature.
- The term comes from the Greek words *Anthropos* for "human" and *logos* for "study."

Emergence as a discipline

- Historically, anthropology started without specific scientific goals. Anthropology is modern science that started in the late 1800s (Ember, Ember, and Peregrine, 2015) when researchers began documenting their excavations carefully.
- Smith and Davies (2008) said that early anthropology has its roots in the efforts of Western civilization to better understand the lands it colonized. Many anthropologists recognized by the 1950s that ethnography produced under the colonial paradigm was not as objective as it might be. With this, ethical ethnography guidelines were being written by the mid-1970s, and today students of anthropology receive extensive training in ethical and human relations before doing fieldwork.

Economics

- According to Mankiw and Taylor (2014, p. 1), economics is the study of how society manages its scarce resources. The study attempts to answer these three key questions: (a) What goods and services should be produced? (b) How should these goods and services be produced? and (c) Who should get the goods and services that have been produced?
- The field of economics is divided into two branches: Microeconomics and Macroeconomics.

Emergence as a discipline

- Economic thinking goes as far back as the ancient Greeks and the Old Middle East.

Geography

- Geography is the study of how and why things vary on the earth's surface from place to place (Getis, Bjelland, and Getis, 2014).
- Geography has two closely interrelated branches: Human geography and Physical geography
- Learning about geography makes us critical thinkers since we become more aware of the place, we live in. It helps us to think deeper about the earth.

Emergence as a discipline

- The word "geography" was first used in the 3rd century BCE as the title of the book of Eratosthenes (276-195 BCE), *Geographica*. Other Greek thinkers, such as Thales (625-546 BCE), Herodotus (484-425 BCE), Aristotle (385-323 BCE), Strabo (63 BC-23 AD), and Ptolemy (100-170 CE) also made important geographical contributions.
- When most of the great works about geography were lost during the Dark Ages in Europe, Arab geographers such as Muhammad al-Idrisi (1099-1165), Ibn Battuta (1304-1369), and Ibn Khaldun (1332-1406), have nurtured and advanced the study of geography.
- Marco Polo (1254-1324), an Italian merchant, published his work *The Description of the World*, later known as *The Travels of Marco Polo*, which described his experiences in Asia between 1271 and 1295. During the Renaissance Period, more people would want to explore the unknown parts of the world.
- By the 18th century, geography gained popularity and was introduced as a formal study in universities
- By the end of World War II, geography used new ways to collect and process data, such as the use of computers for mapping and analysis. Remote sensors and aerial photography were also incorporated in geographical studies.

History

- History is the study of the past and our attempts at understanding it. Historians (people who study history) conduct investigations to answer questions about historical events, and their connection to the present time.
- The word *history* has originated from an ancient Greek verb meaning *to know.*
- Learning about history enhances our knowledge of the world by helping us understand past events. We can explain our current situation because of this learning.

Emergence as a discipline

- Herodotus (484-425 BCE) (considered as the "Father of History") and Thucydides (460-400 BCE), helped to lay the groundwork for the emergence of history as a formal study. Although Herodotus' works show the great desire to record everything important about the past, he used a lot of unverified facts and failed to make a clear distinction between fact and fable. On the other hand, as his work on recording the Peloponnesian War has shown, Thucydides attempted to establish chronology and facts with some precision.
- During the Medieval period, two types of histories emerged: universal history and chronicle history. Contact with Byzantines and Muslims broadened the writing of history by showing other viewpoints to the Westerners.
- The Renaissance humanism revolutionized historiography when historians revived classical learning, as shown by the works of Niccolò Machiavelli (1469-1527) and Francesco Guicciardini (1483-1540).
- Both the Reformation and the Catholic Reformation supported historical scholarship with the use of the past to back up their religious views.

Linguistics

- Linguistics is concerned with the nature of language and (linguistic) communication (Akmajian, Demers, Farmer, and Harnish, 2001, p. 1).

- The primary goal of linguists (people who study linguistics) is not just to understand the structures and functions of language. Understanding human language can lead to understanding more about how people think. In this view, Chomsky (1975, mentioned in Akmajian, Demers, Farmer, and Harnish, 2001) argues that the study of language is the study of the human mind.
- The various branches of linguistics are the following: Phonetics, Phonology, Morphology, Syntax, Discourse analysis, semantics, historical linguistics, and sociolinguistics.

Political Science

- Morlino, Berg-Schlosser, and Badie (2017, p. 2) defined political science as the science of power. Its study is concern about legitimacy, sovereignty, and authority.
- The following are the subfields of political science according to Roskin, Cord, Medeiros, and Jones (2012, p. 13):

Psychology

- Psychology is the study of behavior and mental processes (King, 2019, p. 2), such as biological activities, feelings, perceptions, memory, reasoning, and thoughts (Feldman, 2019).
- Psychology as a study has different methods: biological, behavioral, psychodynamic, humanistic, cognitive, evolutionary, and sociocultural.

<u>Emergence as a discipline</u>

- Psychology, as a study, emerged from the disciplines of physiology and philosophy.
- Wilhelm Wundt (1832-1920) and William James (1842-1910) are founders of psychology
- Wundt's proposed the approach called "structuralism" due to his study on the elemental parts or structures of the human mind.
- James became the proponent for the approach was called "functionalism." His study looked into the functions of the mind and behavior. This approach is linked to Charles Darwin's theory of evolution through natural selection. This theory still influences psychologists at present since it is fully supported by usual observation.

Sociology

- Macionis (2012, p. 2) defined sociology as the systematic study of human society. Sociologists use a sociological perspective to find usual patterns in people's behavior to explain social phenomena.
- There are a lot of key topics that can be explored in sociology. Examples of topics are race and ethnicity; youth cultures; gender and sexuality; class conflict and inequalities, and many more.

Demography

- Demography is the science of population (Lundquist, Anderton, and Yaukey, 2015, p. 2). It is mostly concerned about births, deaths, and migration since these affect the population.
- Other topics related to demography include population growth; age and sex structure; mortality, morbidity and health, fertility; unions and householding; migration; urbanization; and population diversity (Lundquist, Anderton, and Yaukey, 2015).
- Demography helps governments and society to make better plans to address challenges related to population development, aging, and migration.

<u>Emergence as a discipline</u>

- John Graunt's (1620-1674) work, entitled *Natural and Political Observations Mentioned in a Following Index, and Made Upon the Bills of Mortality* (1662), contributed to the development of demography as a discipline. Another such

study was undertaken by Johann Süssmilch (1707-1767), whose work is entitled *Die Göttliche Ordnung* (1741; "The Divine Order").

- Demography became more interdisciplinary during the period between the two World Wars. The founding of the International Union for the Scientific Study of Population in 1928 ushered in the growth of modern demography.

What's More

Comparison Chart

Using the graphic organizer below, write the similarities and differences between the various social science disciplines. Based on the completed graphic organizer, write a brief response to the question.

SOCIAL SCIENCE DISCIPLINES Anthropology•Economics•Geography•History•Linguistics Political Science•Psychology•Sociology•Demography	
How are they alike?	*How are they different?*
How do the various social science disciplines help us understand people?	

Note: After Reading Strategy is adapted from the National Behavior Support Service (NBSS, 2016)

Activity: Chain of Events Summary: Create a summary of the emergence of each social science discipline by drawing or writing text.

What I Have Learned

What's Apt?

Identify the appropriate social science discipline applicable in the given topic for research. Give your reason for choosing this discipline.

Situation	Appropriate Social Science Discipline	Reason
Studying the landslide hazard mapping and its effects on the community		
An inquiry into the Philippine law entitled *Human Security Act of 2007*		
An inquiry on the population dynamics and fertility		
Studying about the rapid development of language		
Looking into the impact of the COVID-19 pandemic crisis on the small businesses in the Philippines		

What I can Do

Reflective Essay: Topic: How can these social science disciplines help solve social problems, such as the COVID-19 pandemic crisis at present?

Assessment

Part 1: Choose the letter of the correct answer.

1. He proposed a new language of understanding economic phenomena through the use of economic models and theories.
   A. Karl Marx
   B. Thomas Malthus
   C. Leon Walras
   D. Adam Smith

2. This social science discipline originally means "to know." It is the study of the past as well as attempting to understand it.
   A. Political science
   B. History
   C. Psychology
   D. Demography

3. Mark, a psychologist, is interested in studying emotional expressions. He wants to know if it influences the overall well-being of a person. In this example, this kind of research topic is inclined towards the theoretical work of
   A. William James
   B. Sigmund Freud
   C. Charles Darwin
   D. Wilhelm Wundt

4. What can a sociologist use to gather data quantitatively?
   A. A large survey
   B. A literature search
   C. An in-depth interview
   D. A review of television programs

5. The following shows the significance of demography as a study, **except**
   A. Estimate the required funding for senior services
   B. Development of adequate and workable health care systems
   C. Aid in the planning of school classroom construction
   D. Explain people's behavior

6. This sociological theory, pioneered by Auguste Comte, used scientific facts to understand society.
   A. New social history
   B. Social ethnology
   C. Stoicism
   D. Positivism

7. This theory was introduced by Ferdinand de Saussure and helped in the progress of linguistics as a discipline.
   A. Structuralism
   B. General approach
   C. Neogrammarianism
   D. Functionalism

8. This method, employed by several social science disciplines, involves immersing oneself in the data as much as possible.
   A. Secondary data analysis
   B. Historiography
   C. Fieldwork
   D. Experiment

9. These geographers paved the way for modern geography.
   A. Karl Ritter and Alexander von Humboldt
   B. James Wundt and Charles Darwin
   C. Edward Ullman and Peter Haggett
   D. John Maynard Keynes and Milton Friedman

10. This development of the study of history stemmed from the fact that there were parts of the past that were principally disregarded (examples are narratives about women, etc.).
   A. Antiquarianism
   B. Church history
   C. Classical scholarship
   D. New social history

Lesson 3 Structural - Functionalism

What I Need to Know

In this lesson, you will be learning one of the dominant approaches in Social Science. Structural-Functionalism explains how Society works through social structure or institution.

What's New

Activity- Picture Me

Directions: Draw a picture of a house and label each part. Answer the following questions:

1. What part of the house do you consider the most important?
2. What will happen if one of the parts is destroyed? Can you still consider it a house?
3. What is the purpose of the house?
4. How do you feel as you draw and label the house?

What is It

Structural-Functionalism

What is the Structural-Functionalism approach? Going back to the activity a while back, it pictures the approach itself. According to this concept, a society is compared to a house where is composed of different parts. Each part has functions and is equally important to serve its purpose. Without the help of each part, it will never stand or function. Look at a car, it has different parts to make it run. The wheels, the engine – which is also composed of unique parts inside, the driving mechanism, and the exhaust system all work together so that the car functions and serves its purpose.

Structural-Functionalism is one of the dominant approaches used in the Social Sciences developed by Talcott Parsons under the influence of Max Weber and Emile Durkheim. It sees Society just like the house and the car and its parts. All these parts are working together to make sure society maintains its stability and unity.

Key Concepts in Structural – Functionalism

- Society is composed of integrated social structures such as the church, school (education), government, family, media, and others performing certain functions necessary for the survival of the whole system.
- Social functions can be classified as manifest or latent. Manifest function happens when a social structure performed or carried out its responsibilities according to its purpose, while a latent function is the unexpected result of the structure, whether negative or positive outcome.

What's More

Family Circle

Directions: Think about your family in your home. Your task is to identify at least three manifests (recognized or intended consequences) and three latent (unrecognized and unintended consequences) functions of your family. Once you have identified these functions, you are required to identify social dysfunctions, anything that you think may disrupt your family organization and processes. These social dysfunctions may be independent of the manifest and latent functions identified.

Manifest Functions of the Family	Latent Functions of the Family	Social Dysfunctions to the family

What I can Do

In your own opinion, do you think social structure and social function are important in the maintenance of Society? Why or why not?

Assessment

Guide for the learner: This is an assessment to check your understanding of the lesson presented herein. You may ask for help from your parent/guardian if you don't understand the statements or questions given in each item but are not allowed to ask for answers. Please answer as honestly as you can.

I. **True or False**: Write the letter **T** if the statement is correct and **F** if the statement is wrong.

_____1. Society can function even if the other structure or institution does not.
_____2. The goal of Structural-Functionalism theory is to maintain stability and order.
_____3. A school is an example of a social structure or institution.
_____4. The intended or desired outcome of a social structure is called latent functions.
_____5. Social dysfunction will disturb the society to operate.
_____6. Social function is the result or effect of a social structure.
_____7. Social structure is composed of an unpredictable pattern of social behavior.

_____8. Structural-Functionalism encourages the member of society to participate in the welfare of everyone.
_____9. A manifest function is beneficial to society.
_____10. Structural-Functionalism is focused on individual effort to function but not on the individual group.

MARXISM

What I Need to Know

This lesson will focus on the concept of Marxism or sometimes called conflict theory. You will be able to learn the concepts of Marxism, such as historical materialism, social inequality, class struggle or class conflict, class consciousness, false consciousness, surplus value, praxis, and alienation.

What's In

Activity

Directions: Listen to the song "Tatsulok" by Bamboo. Try to analyze the message of the song and answer the questions below.

1. What is the message of the song?
2. Why do you think the song is entitled "Tatsulok"?
3. Do you think the message of the song is still relevant today? Why or why not?

What is It

What is Marxism?

Marxism or conflict theory is another approach used in Social Science in understanding social phenomena at a macro-level or in a broad aspect. It was created by Karl Marx and Friedrich Engels in which the idea of class struggle is necessary to abolish class oppression. Marxism was developed as opposed to capitalism due to the rise of the Industrial Revolution, where mass production is a common practice.

This theory states that society is divided into two groups; the bourgeoisie, a controlling group, and the proletariat, an oppressed group. In this way, the industrial owners who are capitalists control the means of production, and the workers have nothing but labor services. The conflict between groups normally happens because of scarcity. The theory further views the bourgeoisie as the cause of inequality because of the full control of factors of production. Most factory owners abused workers by paying cheap wages despite long working hours. This means that the proletariat has wealth and power while the working class, despite hard labor, barely receives wealth or resources. Hence, class conflict or class struggle happens due to the unequal distribution of power and wealth.

What should be done to avoid conflict? There should be a class consciousness in which the working class must unite to call for a change in the system. Thus, creating a classless society in which everyone should have equal access to resources or wealth, and nobody is dominant over the other.

Key Concepts of Marxism:

- *Historical materialism* is one important concept of Marxism. This concept is based on the notion that throughout history from primitive Society to the present, material scarcity is the cause of conflict. Hunting and gathering

society experienced conflict because of scarce resources. The feudal society has undergone disagreements between landowners and serfs due to slavery and unjust compensation. Lastly, the modern capitalist society where the cause of conflict is between the bourgeoisie and the proletariat.

- *Alienation* is brought about by capitalism where workers are seen as an object of the commodity to produce goods for profit
- *Surplus value* is generated by workers with low wages for the profit of the bourgeoisie. Maximized profit through cheap labor.
- *False consciousness* is formed when the workers under capitalist society are not aware of their present situation being oppressed and exploited by the bourgeoisie.
- *Praxis* is also a concept of Marxism. It is a process by which interpretation of the real situation should call for a change. This means from the standpoint of the proletariat after knowing class consciousness, there should be a revolutionary change.

What's More

Directions: Write your responses that correspond to the words given below.

Concepts/Ideas of Marxism	Examples
Social Inequality	
Class Conflict	
False Consciousness	
Alienation	
Class consciousness	
Social Inequality	
Surplus Value	
Bourgeoisie	
Proletariat	

What I can Do

Guide Questions:

1. In your analysis, do you think Marxism theory is a solution to end class oppression in our society today? Why?
2. Do you agree that material scarcity is the cause of conflict throughout the history of Society? Why or why not?

Assessment

Directions: Read and analyze the statements carefully. Choose the letter of the correct answer and write on the space provided in each item.

_____1. In Marxist theory, those who own property and the means of production are called _____.

A. Wealthy
B. Bourgeoisie
C. Proletariat
D. Anarchist

_____2. What concept in Marxism refers to a condition where workers are no longer seen as a human being but as an object to produce products for profit?
A. Alienation
B. Slavery
C. Starvation
D. Deprivation

_____3. The tension between the two social classes is called_____.
A. Class consciousness
B. Class Conflict
C. Praxis
D. False Consciousness

_____4. It refers to a concept where it looks at the past development of a society that the mode of production is necessary to avoid conflict such as scarcity of resources.
A. Class Conflict
B. Historical materialism
C. Praxis
D. Alienation

_____5. According to Marxism, what process refers to the act of engaging or applying an observed phenomenon in Society to bring about change?
A. Class conflict
B. Class consciousness
C. Social inequality
D. Praxis

_____6. Which of the following refers to the class of collective workers responsible to produce goods?
A. Proletariat
B. Analysts
C. Bourgeoisie
D. Capitalist

_____7. What does it mean when the working class realized their true nature and status that they are oppressed by the bourgeoisie?
A. Class conflict
B. Class consciousness
C. Social inequality
D. Praxis

_____8. What condition would it be if the proletariat accepts the belief that their present status of being abused and exploited by the bourgeoisie is natural or legal?
A. Class consciousness
B. Class Conflict
C. Praxis
D. False Consciousness

_____9. What refers to a condition where the bourgeoisie has full control or access to means of production while the proletariat has nothing but labor services?
A. Class conflict
B. Class consciousness
C. Social inequality
D. Praxis

_____10. This approach views Society, which is composed of two opposing classes or groups over the scarce resources resulting in conflict.
A. Structural-Functionalism
B. Symbolic Interactionism
C. Marxism
D. Rational Choice Theory

Lesson 4	Symbolic Interactionism

What I Need to Know

At the end of this module, the students will be able to:

a. Analyze the concept of Symbolic Interactionism;

b. Appraise the meanings that people attach to everyday forms of interactions to explain social behavior.

What's New

Labeling

Instruction: Label the following images by giving meaning based on your interpretation.

1. _____

2. _____

3. _____

4. _____

Guide questions:

1. How do you relate to each image?
2. Does it remind you of something in your life?
3. Do you think you have the same interpretation as others?

What is It

Symbolic Interactionism

- Symbolic interactionism is a theoretical approach to understanding the relationship between humans and Society. This perspective relies on the symbolic meaning that people develop and build upon in the process of social interaction.
- George Herbert Mead was one of the prominent figures in the study of this theory, where gestures, according to him, are important in communication.
- The basic notion of symbolic interactionism is that human action and interaction are understandable only through the exchange of meaningful

communication or symbols. In this approach, humans are portrayed as acting, as opposed to being acted upon.

- The human being can think and create responses based on his awareness, while animals can only respond to their environment without using a logical process.
- Subjective meanings are emphasized because it is believed that people behave based on what they believe and not just on what is objectively true.

Principles of Symbolic Interactionism

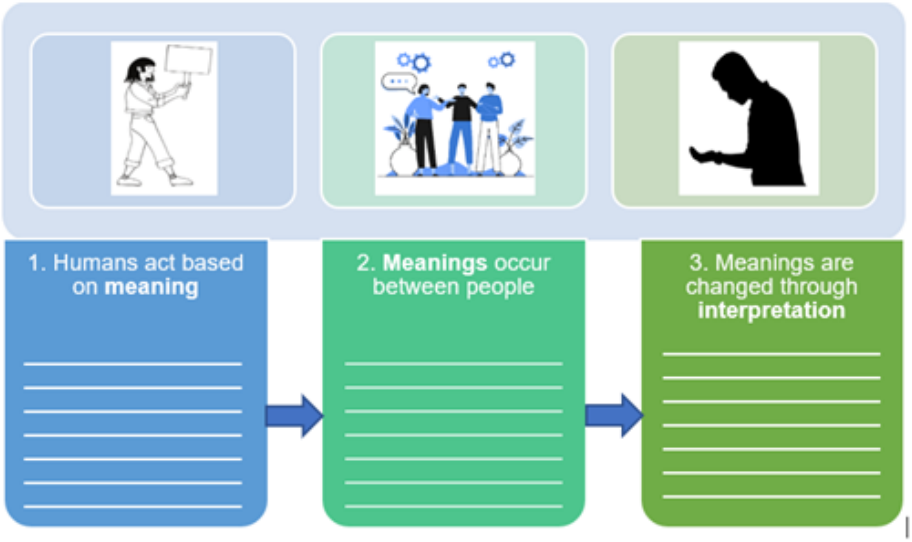
- Human beings act toward things based on the meanings that things have for them (Ex. I don't drink cola because I have been told since childhood that it can cause cancer.)
- Meanings arise from social interaction or exposure to certain experiences
- Social behavior is a product or result of collective action from individuals

Key Concepts

- **Symbols** are important means for people to communicate extensively and creatively. These are culturally acquired social objects with shared meanings that are created and allow people to express and understand each other's thoughts, ideas, and feelings.
- **Collaboration** is cognitive and conscious through humans, while animals rely on the physiological response (use of instinct rather than intellect).
- The ***self*** refers to the awareness or conscious personality of an individual. Taking the roles of others is important to analyze one's self.
- **The mind** is important in communication. The mental awareness of individuals is necessary when symbols are presented and interpreted to facilitate communication.

What's More

Directions: Central to the concept of symbolic interactionism is meaning. Explain the three statements below by giving examples to supplement your answer.



What I can Do

Directions: Your task is to do a simple experiment in your home. You need three members of your family to participate in the task. Try to ask for help to complete your assignments given by your teacher in different approaches indicated below and fill out the observation table given below.

Family member#1: You ask in a very warm and polite manner.
Family member #2: Act like you are commanding him or her to the task for you.
Family member #3: You ask her in a casual way but try to ignore him/her after you make your request.

Respondents	How did your respondents react? (1 adjective word only)	Who among them helped you with the request? Simply indicate (√) or (x) mark.	Why did your respondent help you or did not help you out?
Family member #1			
Family member #2			
Family member #3			

Processing Questions:

1. Do you think that your way of approaching your family members affects their action on your request? Why or why not?
2. If you have approached them in the same manner, would you get the same result? Explain your answer.
3. Based on your experiment, what can you say about the meanings, interpretations, and symbols in human interactions? Were you able to understand the symbolic interactionism theory?

Assessment

Directions: Read and analyze the given statements carefully. Write **True** if the statement is correct and **False** if it is incorrect on the space provided.

_____1. Symbols are an important component of communication.
_____2. Symbolic interactionism views society based on the pattern of interaction of people.
_____3. Human beings have a predictable response and are not conscious of their actions.
_____4. Symbolic Interactionism states that human beings always interpret meanings based on what is true to everyone.
_____5. The awareness of the *self* is an important concept in acquiring social roles.
_____6. Human beings interpret and behave based on the meaning they have for certain things.
_____7. The concept of the *mind* is not involved in social interaction.
_____8. Human beings collaborate using their mental consciousness while animals do not.
_____9. Action and interaction are important in analyzing Society in Symbolic Interactionissm.
_____10. Meanings are acquired by individuals since birth.

Lesson 5	Structural – Functionalism: It's Applications to Socio-Cultural, Economics, and Political Conditions of Society

What I Need to Know

You have so far learned the basic concepts and ideas of the three dominant approaches in the Social Sciences. In this module, you will be able to learn the strengths and weaknesses of Structural Functionalism, Marxism, and Symbolic Interactionism. Furthermore, the module is focused on the application of the three theories in analyzing the socio-cultural, political, and economic conditions of Society.

Most Essential Learning Competencies (MELCS): Apply the major social science theories and their importance in examining socio-cultural, economic, and political conditions.

a. Structural-functionalism
b. Marxism
c. Symbolic Interactionism

What's New

Me If You Can

Directions: Ask one member of your family to assist you in doing the task. You need a small ball or any round shape material in your home. Find a place in your backyard or inside your house with at least 5 meters or more in dimension. Make sure that you stand about 5 meters away from your partner. Hand over the ball to your partner, and if you are ready, let him/her toss the ball over you and be prepared to catch it. Do it alternately if you and try to answer the following questions:

1. Which hand did you use to catch the ball?
2. Why did you use this hand rather than the other one? What does this mean?
3. If one of your hands is dominant or stronger, does this mean that your other hand is useless or worthless? Why or why not?

What is It

Just like the activity you have performed above, the three theories discussed in the previous module also have strengths and weaknesses. Now try to evaluate the tables below.

Structural-Functionalism

Strengths	Weaknesses
❖ There is a consensus of shared values and norms among the individuals	❖ It fails to explain independence in contrast to cooperation
❖ Social order is evident because of the belief that each structure is integrated.	❖ It ignores inequality in terms of gender, class, and race which lead to conflict
❖ It promotes stability and avoids conflict	❖ It cannot adapt to a sudden change because it promotes stability or the status quo
❖ Cooperation is present because of	❖ It looks at a group or macro level but

common beliefs and values	failed to explain individuals who are likely to deviate from social roles or norms

Marxism

Strengths	**Weaknesses**
❖ It explains the cause and dynamics of conflict of social inequality well	❖ Social stability is hardly achieved because of constant change brought by the opposing sides
❖ It encourages collaboration through class consciousness	❖ It provokes conflict rather than harmony or order
❖ It gives importance to economic welfare through the material	❖ It focuses on the macro or broad level, ignoring the behavioral differences of individuals
❖ It emphasizes social change through class struggle	❖ Control of power comes from those who control the resources or means of production

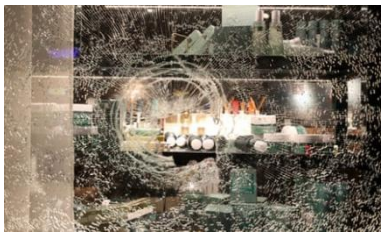
Symbolic Interactionism

Strengths	**Weaknesses**
❖ It recognizes that people use symbols to interpret meanings attached to objects, actions, and events.	❖ It focuses on small-scale and too much emphasis on the individual aspect of behavior
❖ People's understanding of reality is variable and changing	❖ Disregards the influence and role of institutions to individual interactions
❖ Human beings respond to others based on their understanding of the situation	❖ It generalizes that people respond and react rationally (act based on the intellect)
❖ It recognizes that people in a society created meanings and social interaction	❖ Symbols may be interpreted incorrectly or differently among different groups of people.

What's More

Directions: Read and analyze the news article and answer the processing questions indicated below.

Looting and violence continues in New York City despite an unprecedented curfew



Photograph: Anadolu Agency/Getty Images
Guardian staff and agencies
Published on Tue 2 Jun 2020 15.14 BST

Link: https://www.theguardian.com/us-news/2020/jun/02/new-york-city-looting-despite-

Processing Questions:

1. What is the issue presented in the news?

_____

2. How does it affect society?

_____

3. Why do these issues happen in New York?

_____

4. Analyze the issues presented in the news article and interpret how these issues happen through the views or perspectives of the following:
    a. Structural functionalism

    _____

    b. Marxism

    _____

    c. Symbolic interactionism

    _____

What I can Do

Armed Robbery in The Lens of Functionalist, Conflict, and Symbolic

Directions: With your enough knowledge and ideas on Structural Functionalism, Marxism, and Symbolic Interactionism, interpret the rampant incidence of armed robbery in the country. Use the guide below to analyze and interpret.

Guide Questions:

1. Why do armed robbery happens?
2. How do you explain armed robbery using the three perspectives?
3. What are the possible reasons why armed robbery happens, according to Structural-Functionalism, Marxism, and Symbolic Interactionism?

a. Structural-Functionalism View:_____

b. Marxism_____

c. Symbolic Interactionism_____

Which among the three theories best describes the social and cultural, economic, and political conditions of society? Elaborate on your answer.

_____

Assessment

Directions: Think of any social phenomena or issues concerning socio-cultural, economic, and political. Write an analytical essay using one of the three approaches discussed earlier. Make sure to choose your line of interest and interpret the phenomenon or issue by appropriately utilizing the chosen approach. Try to present the phenomenon with the following format:

1. Introduction – Background of the phenomenon or issue. Include also the research question and objectives.
2. Body – Present your argument/explanations using either Structural-Functionalism, Marxism, and Symbolic Interactionism. Explain why your chosen approach is suitable in the interpretation of the phenomenon or issue.
3. Conclusion – What is your judgment or final point of view?

Lesson 6	Psychoanalysis

What I Need to Know

This module is designed for you to ponder on the basic concepts and principles of psychoanalysis and rational choice. Also, it will be the guide of the learners to analyze the psychodynamics of the person's personality in terms of Id, Ego, and Superego. It will help the students to interpret personal and social experiences using principles of psychoanalysis and rational choice.

What I Know

Activity 1. MY PRIOR KNOWLEDGE

Directions: Study the puzzle. Find the words that can be associated with psychoanalysis.

PUZZLE

E	A	W	A	R	E	N	E	S	S	S	N	E	M
H	O	M	E	N	R	W	C	S	I	U	A	N	N
T	H	E	O	R	Y	N	N	T	N	A	S	S	O
M	T	T	S	O	N	S	U	C	T	T	I	M	I
E	I	R	N	T	T	O	O	E	C	R	S	E	S
Y	M	S	E	E	P	N	O	I	I	I	R	C	S
A	T	O	X	A	S	M	T	S	L	N	A	H	E
C	I	E	T	C	T	S	N	T	F	A	H	A	R
I	T	Y	I	I	T	M	S	R	N	R	T	N	P
S	Y	O	C	X	O	S	E	C	O	E	A	I	E
N	U	I	N	U	N	N	E	N	C	R	C	S	D

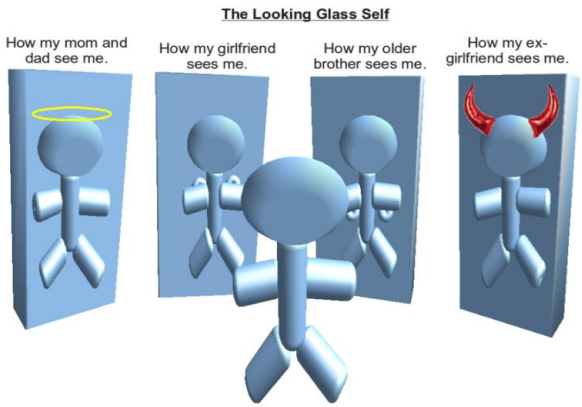
O	R	S	A	L	N	S	Y	Y	N	P	Y	A	N

What's In

Activity 2. Picture Analysis

Directions: Look at the picture below and answer the given question.



https://commons.wikimedia.org/wiki/File:The_looking_glass

Explain "THE LOOKING GLASS SELF".

What's New

"Although psychology and pedagogy have always maintained the belief that a child is a happy being without any conflicts and have assumed that the sufferings of adults are the results of the burdens and hardships of reality, it must be asserted that just the opposite is true. What we learn about the child and the adult through psychoanalysis shows that all the sufferings of later life are for the most part repetitions of these earlier ones and that every child in the first years of life goes through an immeasurable degree of suffering".

-MELANIE KLEIN

Source: http://www.notable-quotes.com/p/psychoanalysis_quotes.html

What is it

WHAT IS PSYCHOANALYSIS?

- Sir Sigmund Freud (1856-1939) originated psychoanalysis. Sir Sigmund thought that persons might be relieved in creating conscious their unconscious opinions or views and motivations.
- Psychoanalysis is a way of managing emotional problems that contain a conversation between a psychoanalyst and an individual to obtain the perception of a person's inner world and how it moves his or her behavior, emotions, and relationships.

BASIC PRINCIPLES OF PSYCHOANALYSIS

- Their reservoir of feelings, thoughts, urges, and memories (unconscious) drives influence the way that people behave.
- The activities of early childhood jointly have an impact on the development of personality; Freud proposed that character was mainly set-in-stone by the age of five.
- Emotional and psychological difficulties such as nervousness and depression are frequently deep-rooted in conflicts between the unconscious and conscious observance.
- Taking information from the unconscious into consciousness can lead to catharsis and allow a person to deal with the issue
- A trained analyst can aid bring convinced aspects of the unconscious into awareness by using a variation of psychoanalytic approaches such as dream analysis and free association.
- People make use of some defense mechanisms to defend themselves from information restricted in the unconscious.

PSYCHODYNAMICS OF THE PERSON'S PERSONALITY

- The id is the personality component that works to please basic desires, needs, and urges. The id works based on pleasure or instinct, which demands immediate gratification of needs.
- The ego is the personality that deals with the demands of reality. It helps to normalize the urges of the id and makes us perform in ways that are both suitable and realistic. Rather than engaging in behaviors intended to satisfy our urges and desires, the ego motivates us to accomplish our needs in socially suitable ways and realistically.

- The superego is the final aspect of personality. It embraces our ideals and values. The beliefs and values that our parents and society impart in us are the guiding motivation of the superego, and it attempts to make us behave according to the accepted norms.

Lesson 7	Rational Choice

What I Need to Know

WHAT IS RATIONAL CHOICE?

The rational choice theory revealed that people practice analytical estimation in making intelligent alternatives and accomplish results that are oriented with their personal goals. The outcomes are also linked with a person's greatest self-interests. It is expected that utilizing rational choice theory will offer individuals the most significant help and fulfillment, given the available alternatives they have.

BASIC PRINCIPLES OF RATIONAL CHOICE

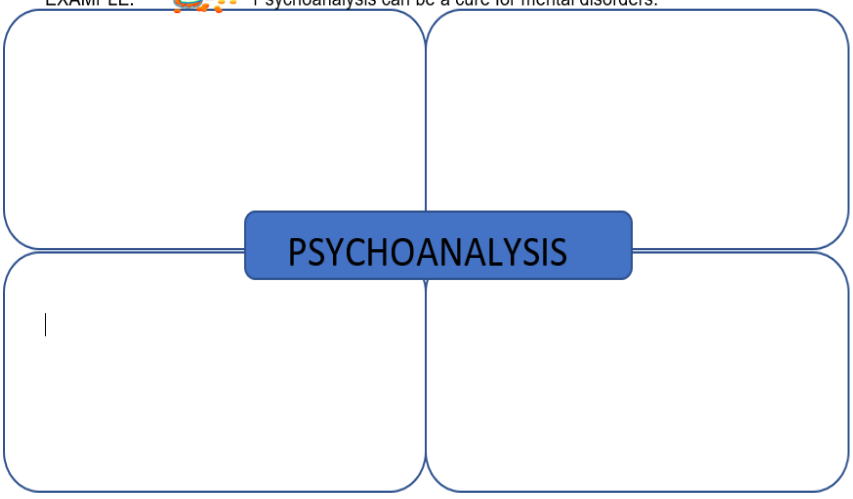
1. Individuals are rational.
   We, as human beings, can think logically.
2. Individuals have an interest.
   Every person has different interests in life.
3. Individuals make choices.
   A person can choose from her/his preferences, and the choices of people influence their utilities.
4. Individuals logically make choices to increase their utilities.
   We do not have full control over the outcome of our choices.

What's More

Our Connection!

Directions: Sketch a picture that represents your understanding of the basic principles of psychoanalysis through" Sketch Noting Map" and write a short description.

EXAMPLE: Psychoanalysis can be a cure for mental disorders.



What I have Learned

Activity 5. STRIKING POINTS

Directions: Give 5 striking points of the lesson.

1.
2.
3.
4.
5.

https://www.vectorstock.com/royalty-free-vector/a-hi-five-artwork-with-a-palm-vector-2855566

What I can Do

Think of a situation in your life wherein you make a "big choice."

1. What is the story all about? What happened to your choice?
2. Are you satisfied with your choice? Why?
3. What basic principles of rational choice did you use in your decision? Explain your answer.

Assessment

Directions: Read and analyze the items carefully. Write **TRUE** if the statement is correct, otherwise **FALSE**.

_____1. The superego is the personality that works to please basic urges and needs.
_____2 Psychoanalysis therapy can release suppressed emotions experiences.
_____3. Individuals are rational.
_____4. It is a method of treating mental illness.
_____5. Psychoanalysis is considered an organization of ideas concerning the human mind and personality.
_____6. The ego deals reality.
_____7. Rational choice theory revealed that people practice analytical calculations in making intelligent alternatives and attain results that are oriented with their personal goals.
_____8. All people have the same interests.
_____9. Sigmund Freud (1856-1939) originated psychoanalysis
_____10. The beliefs and values that our parents and society imparted to us are the motivating force of the ego.

Additional Activity

Situational Analysis Directions: Read and analyze the given situation. Write your answer on the space provided.

Your final examination is approaching; however, your "balikbayan" friend is asking you to join on a 2-day vacation for free in Boracay. What will you do? Give three options using the "Psychodynamics of the Person's Personality" approach.

ID: _____
EGO: _____
SUPEREGO: _____

Lesson 8	Institutionalism and Feminist Theory

What I Need to Know

This module is designed for you to ponder on the different key concepts and approaches in the social sciences. It will help the students to understand an individual's emotions, behavior, and relationships. The designed learning exercises will help the learners to interpret personal and social experiences using relevant approaches in social sciences.

MOST ESSENTIAL LEARNING COMPETENCIES:

After going through this module, you are expected to

- Analyze the basic concepts and principles of the major social science ideas:
  - A. Institutionalism
  - B. Feminist Theory

What I Know

MY PRIOR KNOWLEDGE

Directions: Directions: Study the pictures. Explain the importance of the influence of the given institutions in your life.

"vidya pratishthan's school of biotechnology" by sarusekh is licensed under CC BY-NC 2.0

"St. Clare Church, Stockholm" by szeke is licensed under CC BY-NC-SA 2.0

What's In

Activity. Picture Analysis

Directions: Look at the picture below and give your insight into it.

https://www.pinterest.co.uk/amp/pin/358458451562082711/

What's New

Institutionalism, in the social sciences, an approach that emphasizes the role of institutions". Agree or not?
Read more at Barkanov, Boris. "Institutionalism". Encyclopedia Britannica, 14 Jun. 2016, https://www.britannica.com/topic/institutionalism. Accessed 9 February 2021.

What is It

WHAT IS INSTITUTIONALISM?

- It is an approach that emphasizes the role of institutions.
- Institutionalism considers the processes by which organizations, including norms, routines, rules, and schemes, become recognized as authoritative rules for social behavior.

What is an institution?

- The institutions can be formal or informal. An institution has the given characteristics:

1. Structure- It provides no place for individuals and their welfares; instead, it requires groups of people in some patterned interactions that are likely based upon stated relationships among the members.
2. Regulators of individual behavior- Institutions must constrain the conduct of their members.
3. Shared Values- There should be some sense of common values among the members of an organization.
4. Legitimacy- Institutions require legality and validity. They have respected themselves and not merely for their immediate purposes and outputs. Institution's stabilities help to contribute to gain this legitimacy.

WHAT IS FEMINIST THEORY?

- It supports equality for women and men.
- It studies the position of women and men in society.
- It questions the differences between men and women, including how class, ethnicity, nationality, race, sexuality, and age intersect with gender.
- The concern of this theory is for the women to express their voice and to feature the numerous ways women have provided to society. [6]

FOUR BASIC PRINCIPLES

1. Increase equal opportunities.
2. Intensify human alternative: From a feminist perspective, men and women should have the liberty to expand their interests and talents
3. Eliminate gender stratification: The feminists disagree with the cultural norms and laws that limit education, job opportunities, and income for women.
4. End sexual violence and promote sexual freedom.

GENDER IDEOLOGY

It emphasizes beliefs concerning the appropriate roles and essential natures of men and women in the community. The division between gender and sex is dominant in the idea of gender ideology. The biological distinctions of sex differences are used as the basis for the duty or role of gender and the cultural construction of gender identities.

What's More

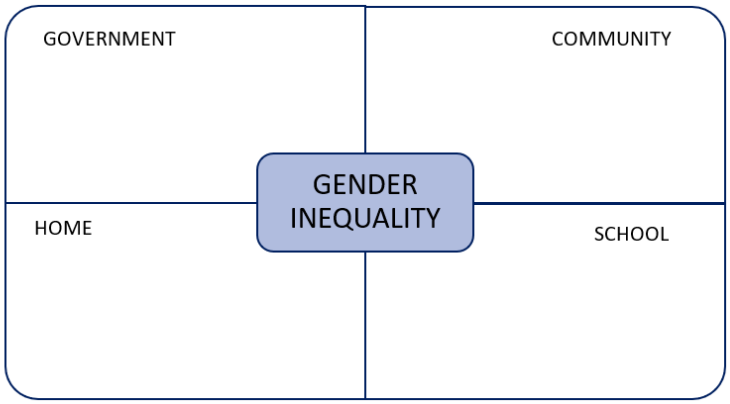
Critical Thinking Questions

Directions: Read and analyze the questions carefully. Answer the given questions briefly.

1. How do feminists create an impact on society?
2. What will happen if there are no institutions?
3. What is your role in an institution?

What I can Do

Directions: Design a concept map citing instances of gender inequality in the given institution.



Assessment

Directions: Read and analyze the statements carefully. Write **TRUE** if the statement is correct and **FALSE** if it is not correct.

_____1. The formal institutions are not officially recognized but practice normally accepted throughout society.

_____2. Gender inequality is concerned with beliefs about the proper roles and inner natures of men and women in society.

_____3. Gender inequality recognizes the equality between women and men and that gender affects an individual's living experiences.

_____4. Institutionalism offers no place for people and their interests instead it involves groups of individuals in some patterned interactions that are predictable.
_____5. Formal institutions include customs, moral values, religious beliefs, traditions, and all other norms of behavior that have passed over time.
_____6. The central concept of gender equality lies in the difference between sex and gender.
_____7. The feminist theory supports equality for women and men.
_____8. Institutions can be formal or informal.
_____9. Institutionalism is an approach that emphasizes the role of institutions.
_____10. The feminist theory examines the position of women and men in the community.

Lesson 9 Hermeneutic Phenomenology and Human-Environment System

What I Need to Know

This module is designed for you to ponder on the different key concepts and approaches in the social sciences. This learning material will tackle the different ways by which human-environmental interactions shape cultural and natural landscapes and will describe the basic concept of hermeneutic phenomenology.

MOST ESSENTIAL LEARNING COMPETENCIES:

After going through this module, you are expected to

- Analyze the basic concepts and principles of the major social science ideas:
  - A. Hermeneutical Phenomenology
  - B. Human-Environment System

What I know

MY PRIOR KNOWLEDGE

Directions: Interpret the pictures

"intuitive abstract drawings" by shannonkringen is licensed under CC BY-SA 2.0

INTERPRETATION

Why is your interpretation different from your classmates?

What's In

Picture Analysis

Directions: Look at the picture below and give your insight into it.

Answer:

"Who needs feminism?" by Laura Forest is licensed under
CC BY-NC 2.0

What's New

"Contrary to what phenomenology—which is always phenomenology of perception—has tried to make us believe, contrary to what our desire cannot fail to be tempted into believing, the thing itself always escapes."— Jacques Derrida. Agree or not?

Read more at https://www.goodreads.com/quotes/tag/phenomenology

What is It

WHAT IS HERMENEUTIC PHENOMENOLOGY?

PHENOMENOLOGY	HERMENEUTIC
It is the study of experience, mainly as it is lived and as it is designed over consciousness. "Experience" in this situation refers not so much to accumulated evidence or knowledge as something that we "undergo." It is something that happens to us, and not something collected and mastered by us.	Determining the intention and meaning of the experience. (Moutakas, 1994) It is the art of science interpretation and, thus, also of meaning. Meaning in this situation is not a thing that is final and stable, but something that is continuously open to new perception and interpretation.
Focus on ontology-what is means to be	Focus on epistemology- how we know.

Therefore, Hermeneutic phenomenology is the study of experience with its meaning. It is also considered as the art of interpreting verbal and non-verbal expressions, with prior aspects of influencing communications. Hermeneutic

phenomenological research is vital to bring to light and reflect upon the lived meaning of this essential experience.

WHAT IS THE HUMAN-ENVIRONMENT SYSTEM?

HUMAN	ENVIRONMENT	SYSTEM
Humans can interact with its environment. Humans and the environment have "mutual" interaction with each other. Humans can change or influence the balance of society.	It is the surroundings or conditions in which a person, animal, or plant lives or works.	It is a complex of interacting components together with the relationships among them that permit the identification of a boundary-maintaining entity or process.

HUMAN-ENVIRONMENT SYSTEM

- It is a system that combines human and natural components to manifest interactions and feedback between them. The most accepted framework for studying such a system is the DPSIR model (drivers, pressures, state, impact, response).
- It is where life interacts with the various non-living components found in the biosphere (atmosphere, hydrosphere, and lithosphere).

What's More

Critical Thinking Questions

Directions: Create a concept map in answering the given question: Why is hermeneutic phenomenology essential in social work?

What I can Do

Directions: Read and study the song "Masdan Mo Ang Kapaligiran" Write your reflection about it. https://www.youtube.com/watch?v=YLIKk9Jqs0c

Assessment

Directions: Read and analyze the items carefully. Choose the letter of the best answer.

_____1. It is a study of experience with its meaning.
A. Epistemology C. Human-environment system
B. Hermeneutic phenomenology D. Ontology

_____2. It is a system that combines human and natural components to manifest interactions and feedback between them.
A. Epistemology C. Human-environment system
B. Hermeneutic phenomenology D. Ontology

_____3. It is the surroundings or conditions in which a person, animal, or plant lives or works.
A. Biotic community C. Humans
B. Environment D. System

_____4. It is a complex of interacting components together with the relationships among them that permit the identification of a boundary-maintaining entity or process.
A. Biotic community C. Humans
B. Environment D. System

_____5. They can change or influence the balance of nature.
A. Biotic community C. Humans
B. Environment D. System

Additional Activity

Action Plan

Directions: Study the pictures below. Write your concrete action plan on how to save our environment from the given situation.

Lesson 10	The Social Science Ideas and Their Importance in Examining Socio-Cultural, Economic, and Political Conditions

What I Need to Know

MELC: Apply social science ideas and their importance in examining socio-cultural, economic, and political conditions.

Expected Learning Outcomes

- The students must be able to determine the differences in socio-cultural, economics,
  and politics.
- The students must be able to explain the importance of social sciences to socio-cultural, economics, and politics.
- The students must be able to develop the value of social sciences in socio-cultural, economics, and politics.

What's New

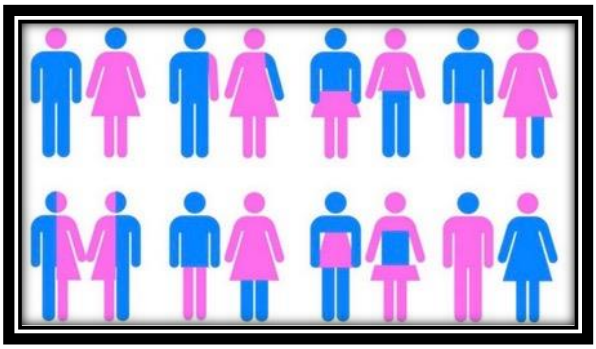
Directions: Using the pictures below, identify which aspect it is related to – **SOCIO-CULTURAL**, **ECONOMICS,** or **POLITICS**. Write your answer on the space provided.

1. _____

2. _____

3. _____

4. _____



5. _____

6. _____

7. _____

8. _____

9. _____ 10. _____

What is It

SOCIO-CULTURAL – ***adjective***- is something that involves the social and cultural aspects. An example of socio-cultural is knowing about the people around you and their family backgrounds.[1]

In short, it refers to common traditions, habits, religions, and beliefs present in a group/population.

ECONOMICS – ***noun***. the scientific study of the ownership, use, and exchange of scarce resources – often shortened to the science of scarcity.[4]

In short, economics was simply defined as studying how to maximize resources and minimize scarcity.

How is economics related to social sciences? Economics deals with one aspect of human behavior which is how men deal with problems of scarcity.[5]

If you can still remember, social sciences deal with human society and social relationships. Economics uses scientific studies about human behavior to meet the needs of humans to survive. What are these necessities of people? These are food, shelter, clothing, safety, etc.

In essence, social sciences try to interpret the behavior of an individual, groups, and/or organizations in order to supply and meet their needs and wants.

POLITICS – *noun.* the activities of the government, members of law-making organizations, or people who try to influence the way a country is governed.[6]

Briefly, it is the agreement between people so they can live together in groups with common interests.

Last March 2020, the government announced that the entire Philippines would be under Community Quarantine to avoid the spread of CoVid19 disease. Some people agreed while others opposed and raised their opinion on social media. Imagine these two different ideas that the government is trying to meet for them to implement what is good for their people and the Philippines. (Imagine these two different ideas that the government is trying to consider so that only the best option for the entire country and its people will be implemented.)

How did politics become related to social sciences? We are referring to the behavior of humans/people who participates in politics, including their choice of voting and their opinion towards certain issues relevant to society.

To sum it up, social sciences are interconnected with socio-cultural, economics, and politics. It tries to explain each action of every individual that makes an impact on how they will deal with the situation. Some of these might be immoral to us, but for some, it is legal and acceptable. Respect, acceptance, and tolerance are what we need to have a harmonious relationship with the people around us.

What's More

Directions: Given the definition below, find the word/s that it describes. Then put the word/s on which aspect it belongs – **SOCIOCULTURAL**, **ECONOMICS,** or **POLITICS**.

Civilization [11]	Appreciation [10]	Politicize [11]
Superstition [11]	Bankruptcy [10]	Public Office [11]
Civil Society[11]	Quota [10]	State [11]
Cross-cultural[8]	Stocks [10]	Platform[11]
Religion[8]	Substitute goods [10]	Incumbent[11]

DEFINITION	SOCIO CULTURAL	ECONOMICS	POLITICS
1. Currently holding office			
2. Goods for which an increase (or fall) in DEMAND for one lead to a fall (or increase) in demand for the other – Coca-Cola and Pepsi, perhaps.			
3. Society is considered a community of citizens linked by common interests and collective activity.			
4. Cause (an activity or event) to become political or Make (someone) politically aware or active.			
5. The stage of human social and cultural development and organization that is considered most advanced.			

What I can Do

Listen to the song entitled "***TATSULOK***" by Bamboo. Identify which part/stanza of the song suggests the aspects of **SOCIO-CULTURAL**, **ECONOMICS,** and **POLITICS**

Assessment

For 5 points each. Make an essay on your understanding of socio-cultural, economic, and political aspects. Cite an example and explain why did you choose that example.
